CAUSES OF DEATH.

INTERNATIONAL CLASSIFICATION.

In the following tables the causes of death are arranged according to the International Classification of the Causes of Death.

The International Classification has been adopted by all the Americas and a greater part of Europe. The United States Bureau of the Census uses it in its statistical compilation of the causes of death, and it has been accepted by practically all of the registration states of the country.

The above table shows the population by counties according to the United States census for 1880, 1890, 1900, and 1910. It is from these figures that our calculations are made in arriving at the estimated population for each year as given in Table No. 24. The calculation is made upon the assumption that the increase between the respective decennial periods was constant. This would, doubtless, approximate very closely the exact population for each. At least it would be near enough to give correct percentages to an exceedingly small fraction. Percentages when given by years (excepting for census years) are based upon deductions made in the manner just stated.
